

NIIT-PH.COM

Passive OSINT Reconnaissance

Assessment focus	Publicly observable domain, DNS and infrastructure information
Target	niit-ph.com
Approach	Passive OSINT / reconnaissance — no exploitation
Evidence included	DNS/IP relationship visual, infrastructure findings and registration evidence
Prepared	26 September 2026

This report presents a concise, evidence-led view of the publicly observable footprint of NIIT-PH.COM. The findings are framed as reconnaissance observations, not as proof of vulnerabilities or compromise.

01 • NIIT-PH.COM Overview

The reconnaissance identified a domain-to-IP relationship, the registrar associated with the domain, authoritative nameservers, an observed hosting/network association, and domain registration metadata.

IPv4 ADDRESS 176.123.0.55 Observed DNS resolution	REGISTRAR NameCheap Domain registration service	DNSSEC Unsigned As observed in the supplied WHOIS evidence
NAMESERVER 01 ns3.alexhost.md	NAMESERVER 02 ns4.alexhost.md	NETWORK ALEXHOST SRL / AS200019 Observed IP/network association

Registration timeline

Created	04 April 2023	Domain registration date
Expires	04 April 2027	Current registry expiry shown in the evidence

Important distinction: NameCheap is identified as the registrar in the evidence. The observed IP is associated with ALEXHOST SRL / AS200019. A registrar and a hosting/network provider are different roles and should not be treated as the same service.

02 • Technical Findings

Finding	Observed value	Meaning
Domain	niit-ph.com	Target domain used for passive reconnaissance
IPv4	176.123.0.55	Observed A/IPv4 resolution
Registrar	NameCheap, Inc.	Registrar associated with the domain registration
Nameservers	ns3.alexhost.md ns4.alexhost.md	Authoritative DNS infrastructure observed for the domain
Hosting / network	ALEXHOST SRL / AS200019	Network association of the observed IPv4 address
Created	04 April 2023	Domain creation date shown in the supplied WHOIS evidence
Expires	04 April 2027	Domain expiry date shown in the supplied WHOIS evidence
DNSSEC	Unsigned	DNSSEC was not enabled according to the supplied evidence

What the DNS relationship shows

niit-ph.com → **176.123.0.55** is the central technical relationship observed during the assessment. The nameserver records point to the AlexHost namespace, while the IP itself is associated with the ALEXHOST network. This gives a useful infrastructure starting point for further passive analysis.

The IP should be described as an **observed/resolved IPv4 address**, not as a permanent or historical "original IP." Website infrastructure can change over time.

03 • Visual OSINT Evidence

The following relationship visual is included as part of the project evidence. It shows the target domain, an observed IPv4 address, and associated email-style nodes displayed in the working visualization.

Evidence note: The email addresses visible in this visualization are retained because they appear in the supplied project screenshot. They should not be presented as independently verified organizational contacts unless separately confirmed. The verified infrastructure findings in this report are the domain, IPv4, registrar, nameservers, network association and registration metadata.

04 • Supporting Screenshots

These cleaned extracts preserve the supplied infrastructure and registration evidence while removing the stray presentation text from the original screenshot.

Evidence represented: IPv4 176.123.0.55; registrar NameCheap; nameservers ns3.alexhost.md and ns4.alexhost.md; ALEXHOST SRL / AS200019; creation 04 April 2023; expiry 04 April 2027; DNSSEC unsigned.

05 • Findings & Interpretation

Domain footprint

The target has a publicly observable DNS footprint that can be mapped without interacting with protected systems.

Infrastructure

The observed IPv4 address is associated with ALEXHOST SRL / AS200019, providing an infrastructure-level attribution for the current observation.

DNS

The domain delegates to ns3.alexhost.md and ns4.alexhost.md, indicating use of AlexHost nameserver infrastructure.

Registration

The supplied WHOIS evidence records the domain as created on 04 April 2023 and expiring on 04 April 2027.

DNSSEC

The supplied evidence reports DNSSEC as unsigned. This is a configuration observation, not by itself proof of compromise or a vulnerability.

Recommended presentation wording

“Through passive OSINT reconnaissance, I identified that niit-ph.com resolves to the IPv4 address 176.123.0.55. WHOIS evidence identifies NameCheap as the registrar, with ns3.alexhost.md and ns4.alexhost.md as nameservers. The observed IP is associated with ALEXHOST SRL / AS200019. The domain was created on 04 April 2023 and is shown as expiring on 04 April 2027, with DNSSEC reported as unsigned.”

06 • Methodology & Conclusion

Passive OSINT workflow

1	Identify target	niit-ph.com
2	Resolve DNS	Domain → IPv4 address
3	Inspect WHOIS	Registrar + registration dates + DNSSEC status
4	Map DNS infrastructure	Nameservers and hosting/network association
5	Document evidence	Screenshots + concise findings

Conclusion

The assessment established a clear, presentation-ready infrastructure picture for NIIT-PH.COM using passive public information. The strongest confirmed relationships in the evidence are the domain-to-IP mapping, the registrar, the two nameservers, the observed ALEXHOST network association, and the domain registration metadata.

Assessment boundary: This report documents reconnaissance findings only. It does not claim unauthorized access, exploitation, compromise, or a security vulnerability based solely on these observations.

Evidence basis: supplied DNS/WHOIS screenshots and project visuals. General DNS/registrar terminology was checked against current Namecheap documentation; the nameserver/hosting relationship is consistent with AlexHost documentation.
